(2023) 'Commercial articulated collaborative in situ 3D bioprinter for skin wound healing', *International Journal of Bioprinting*, 9(2), 675.

AI-use acknowledgement: Some schematic illustrations in the brochure were generated using ChatGPT image generation from prompts written by the authors. All AI-assisted images were reviewed and selected by the authors before inclusion.

OpenAI (2026) ChatGPT image generation, response to prompts: 'Generate a vertical futuristic biomedical illustration with a dark navy-blue background, a simplified light grey/white hollow line-drawing hand, and a glowing transparent hydrogel pattern in #ffc8dd. The hydrogel should be a continuous 3D plump and elastic back and forth serpentine strand, with repeated connected turns, a short gradually thickened light-pink dropping line, and a clean non-sticky medical technology aesthetic.' Unpublished image generated by the authors using ChatGPT. Accessed: 31 May 2026.

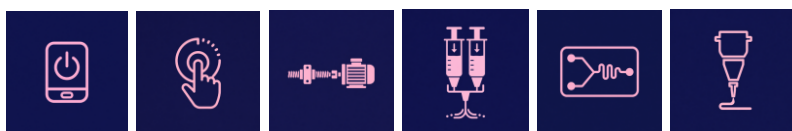

OpenAI (2026) ChatGPT image generation, response to prompt: 'Create a

simplified 2D academic illustration of a chronic wound in a biomedical poster style'. Unpublished image generated by the authors using ChatGPT. Accessed: 31 May 2026.

OpenAI (2026) ChatGPT image generation, response to prompts: 'Create four simplified bioprinter pen poster icons representing Portable, Precise, Intuitive and Ergonomic design features, using colour #ffc8dd line-art icons on a #151649 background, surrounding by a circle'. Unpublished images generated by the authors using ChatGPT. Accessed: 31 May 2026.

OpenAI (2026) ChatGPT image generation, response to prompts: 'Create four simplified bioprinter pen poster icons set illustrating the operating steps of a handheld bioprinter, including "power-on using main switch", "long-press extrusion button", "motor-driven lead screw", "plunger pushes bioinks within syringes", "on-chip mixing" and "hydrogel exists nozzle". Icons were generated as minimalist line-art graphics using light pink line colour #ffbed7 on a dark navy background #001735'. Unpublished images generated by the authors using ChatGPT. Accessed: 31 May 2026.
